

CLA-VAL 210-21

On/Off Altitude Level Control Valve with Flow Control

Simple, Reliable and Accurate

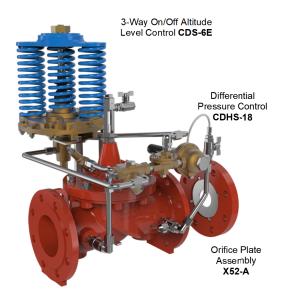

- Completely Automatic Operation
- Easy Adjustment and Maintenance
- Quality Approved Materials
- World Wide Support

CLA-VAL 210-21 Typical Application

The CLA-VAL 210-21 is typically designed for closed tanks where water is withdrawn through a separate line.

The desired water level is set by adjusting the spring force. The pilot control operates on the differential in forces between a spring load and the water level in the reservoir. The CLA-VAL 210-21 is typically installed when feeding must be limited to a maximum flow rate.

The CLA-VAL SERIES 210 On/Off Altitude Level Control Valve controls the high water level in a reservoir or closed tank without the need for floats or other devices. It is a non-throttling valve that remains fully open until the shut-off point is reached.

Make your Valve even Better!

Ŭ	
LFS Option?	Control Low flows or night flows
KO Option?	Extend valve life with Anti-Cavitation trim
KG1 Option?	Use stem cleaning for harsh water
Maintenance?	Check on periodic maintenance
Environment?	Adapt to high temperatures or frost risk
Security?	Add hydraulic safety back-up to your valve
Protection?	<u>Remove</u> excessive system overpressures
Corrosion?	Protect your valve with upgraded materials
