

Pressure Reducing Valve and Downstream Surge Control

STANDARD EQUIPMENT						
No	Description	Qty	Туре			
1	MAIN VALVE HYTROL AE/GE/NGE	1	100-01			
2	ISOLATION BALL VALVE	5	RB-117			
3	STRAINER WITH INCORPORATED ORIFICE	1	X44-A			
4	ONE-WAY FLOW CONTROL	1	CV			
5	PRESSURE REDUCING CONTROL	1	CRD			
6	PRESSURE RELIEF CONTROL	1	CRL / CRL-60			

OPTIONAL FEATURES					
No	Description	Qty	Туре		
С	ONE-WAY FLOW CONTROL (CLOSING SPEED)	1	CV		

NOTES					
AE/GE : DN 32 - DN 400 / NGE : DN 50 - DN 600	OPTIONAL FEATURES :

Pressure Reducing Valve and Downstream Surge Control

Operating data

1.1 **PRESSURE REDUCING FEATURE**

Pressure reducing control CRD (5) is a "normally open" control that senses main valve (1) outlet pressure changes. An increase in outlet pressure tends to close control (5) and a decrease in outlet pressure tends to open control (5). This causes main valve cover pressure to vary and the main valve to modulate (open and close) maintaining a relatively constant outlet pressure.

Pressure reducing control (5) adjustment: Turn the adjusting screw clockwise to increase the setting.

1.2 SURGE CONTROL FEATURE

Pressure relief control CRL (6) is a "normally closed" control that reacts to pressure changes sensed downstream. When downstream pressure increases to the set point of pressure relief control (6), this last one opens and directs inlet pressure into the main valve cover, which closes the main valve (1) until normal downstream pressure is resored. Then the pressure relief control (6) closes.

Pressure relief control (6) adjustment: Turn the adjusting screw clockwise to increase the setting.

1.3 > OPENING SPEED CONTROL

Flow control CV (4) regulates the opening speed of the main valve (1).

Flow control (4) adjustment: Turn the adjusting screw clockwise to make the main valve (1) open more slowly.

1.4 (E*) EUROPEAN STANDARDS

ITEM (2) - Isolation ball valve:

The isolation ball valves RB-117 (2) are used to isolate the pilot system from main line pressure. These isolation ball valves must be open during normal operation.

ITEM (3) - Y-Strainer with incorporated orifice:

The strainer X44-A (3) is installed in the pilot supply line to protect the pilot system from foreign particles. The strainer screen must be cleaned periodically.

1.5 • OPTIONAL FEATURES

Suffix (C) - Closing speed:

Flow control CV (C) regulates the closing speed of main valve (1).

Flow control (C) adjustment: Turn the adjusting screw clockwise to make the valve close more slowly.

1.6 CHECK LIST FOR PROPER OPERATION

- □ System valves open upstream and downstream.
- □ Air removed from the main valve cover and pilot system at all high points.
- □ Isolation ball valves (2) open.
- □ Periodic cleaning of the strainer screen (3) is recommended.
- □ Flow control valve (4) or/and [optional feature (C)] open at least 1 turn.
